```
/**
 * Gets a command-line argument (int), and prints all the divisors of the
given number.
 */
public class Divisors {
   public static void main (String[] args) {
      int inputNumber = Integer.parseInt(args[0]);
      int d = 1;
      while (d <= inputNumber) {
        if ((inputNumber % d) == 0) {
            System.out.println(d);
        }
        d++;
      }
   }
}</pre>
```

```
* Prints a given string, backward. Then prints the middle character in the string.
* The program expects to get one command-line argument: A string.
public class Reverse {
   public static void main (String[] args) {
       String s = args[0];
       int stringLength = s.length();
       // Loop through the entire string length
       for (int i = (stringLength - 1); i >= 0; i--) {
           System.out.print(s.charAt(i));
       // checks if the string lenhth is even or odd to find the middle character
       if ((stringLength % 2) == 0) {
           int midIndex = (stringLength - 1) / 2;
           System.out.println("The middle character is " + s.charAt(midIndex));
        } else {
           int midIndex = stringLength / 2;
           System.out.println("The middle character is " + s.charAt(midIndex));
```

```
Generates and prints random integers in the range [0,10),
    as long as they form a non-decreasing sequence.
public class InOrder {
    public static void main (String[] args) {
        // Setting the upper bound and creating and printing the first random number
        int upperBound = 10;
        int currentNumber = (int) (Math.random() * upperBound);
        System.out.print(currentNumber + " ");
        // as long as the last number that was printed is less than the upperbound
        // the loop keeps running
        while (currentNumber < upperBound) {</pre>
            // generating the next number
            int nextNumber = (int) (Math.random() * upperBound);
            // if the the next number and the last number form a non-decreasing
            // sequence it prints the next number
            // if not, it breaks the loop by setting the last number to the upper bound
            if (nextNumber >= currentNumber) {
                System.out.print(nextNumber + "_ ");
                currentNumber = nextNumber;
            } else {
                currentNumber = upperBound;
```

```
Gets a command-line argument (int), and chekcs if the given number is perfect.
public class Perfect {
    public static void main (String[] args) {
        int inputNum = Integer.parseInt(args[0]);
        // Sets an initial string
        String outStr = "The number " + inputNum + " is a perfect number since " +
                        inputNum + " = 1";
        int d = 1;

        while (d < inputNum) {</pre>
            if (((inputNum % d) == 0) && (d != 1)) {
                outStr = outStr + " + " + d ;
                sumCheck = sumCheck + d;
            d++;
        if (sumCheck == inputNum) {
            System.out.println(outStr);
        } else {
            System.out.println(inputNum + " is not a perfect number");
```

```
import java.util.Random;
   Computes some statistics about families in which the parents decide
   to have children until they have at least one child of each gender.
   The program expects to get two command-line arguments: an int value
   that determines how many families to simulate, and an int value
   that serves as the seed of the random numbers generated by the program.
   Example usage: % java OneOfEachStats 1000 1
public class OneOfEachStats {
    public static void main (String[] args) {
        // Gets the two command-line arguments
        int T = Integer.parseInt(args[0]);
        int seed = Integer.parseInt(args[1]);
        // Initailizes a random numbers generator with the given seed value
        Random generator = new Random(seed);
        // Setting all of the outer-scope variables
        double totalTnums = 0;
        int familyOfTwo = 0;
        int familyOfThree = 0;
        int familyOfFour = 0;
        // Running the Loop T times
        for (int i = 1; i <= T; i++) {
            // Setting the inner-scope vairables
            int boysNum = 0;
            int girlsNum = 0;
            int totalNum = 0;
            while ((boysNum < 1) || (girlsNum < 1)) {</pre>
                double boyOrGirl = generator.nextDouble();
                if (boyOrGirl < 0.5) {</pre>
                    boysNum++;
                } else {
                    girlsNum++;
            // calculate in each experiment the number of children
            totalNum = boysNum + girlsNum;
            // divides the number of children into the required groups
            if (totalNum == 2) familyOfTwo++;
            else if (totalNum == 3) familyOfThree++;
            else if (totalNum >= 4) familyOfFour++;
            totalTnums = totalTnums + totalNum;
   System.out.println("Average: " + (totalTnums / T) + " children to get at least one of
                        each gender");
   System.out.println("Number of families with 2 children: " + familyOfTwo);
   System.out.println("Number of families with 3 children: " + familyOfThree);
   System.out.println("Number of families with 4 or more children: " + familyOfFour);
```

```
// calculate the most common number of children
if ((familyOfTwo > familyOfThree) && (familyOfTwo > familyOfFour)) {
    System.out.println("The most common number of children is 2.");
} else if ((familyOfThree > familyOfTwo) && (familyOfThree > familyOfFour)) {
    System.out.println("The most common number of children is 3.");
} else if ((familyOfFour > familyOfTwo) && (familyOfFour > familyOfThree)) {
    System.out.println("The most common number of children is 4 or more.");
} else if ((familyOfThree > familyOfTwo) && (familyOfThree == familyOfFour)) {
    System.out.println("The most common number of children is 3.");
} else if ((familyOfTwo > familyOfFour) && (familyOfThree == familyOfTwo)) {
    System.out.println("The most common number of children is 2.");
} else if ((familyOfTwo == familyOfFour) && (familyOfThree == familyOfTwo)) {
    System.out.println("The most common number of children is 2.");
}
```
